

UI/UX Case Study

LifeLens

Responsibilities

UX Researcher | UX/UI Designer | User Interviews | Survey Analysis| Competitor Study | Information Architecture | Wireframing | UI Design |Prototyping

Problem Statement

Despite the rise of productivity and wellness apps, users still lack a single, unified system that helps them manage digital life without overwhelming them. Multiple apps create confusion, frequent notifications break focus, and digital fatigue harms emotional well-being. There is currently no calming, integrated solution that supports productivity, wellness, and balance together.

Design Process

Competitive Analysis

Headspace

Used in India for: Meditation, stress relief, sleep

STRENGTHS

- High-quality guided meditation
- Calm and trusted brand

LIMITATIONS

- Focuses only on mental wellness
- No routine building or productivity support
- Does not reduce digital distractions

GAP IDENTIFIED

No balance between focus, routines, and daily digital habits

Forest

Used in India for: focus and reducing phone usage

STRENGTHS

- Encourages phone-free focus time
- Simple and engaging concept

LIMITATIONS

- Only works as a timer-based focus tool
- No wellness, reminders, or emotional insights
- Users still need multiple apps

GAP IDENTIFIED

Focus without lifestyle or emotional support

Google Digital Wellbeing

Used in India for: Screen-time tracking and app usage control

STRENGTHS

- Built-in and widely accessible
- Detailed screen-time analytics

LIMITATIONS

- Restrictive rather than supportive
- No routines, reminders, or emotional guidance
- Very functional, not user-friendly or calming

GAP IDENTIFIED

Data without actionable or emotional support

Notion

Used in India for: Task management and planning

STRENGTHS

- Highly customizable
- Useful for planning and organization

LIMITATIONS

- Overwhelming for daily use
- No wellness or focus management
- High cognitive load for beginners

GAP IDENTIFIED

Productivity-heavy, wellness ignored

Apple Screen Time

Used in India for: Monitoring screen usage, app limits, and digital control

STRENGTHS

- Built-in feature for iOS users
- Detailed screen-time and app-usage statistics

LIMITATIONS

- Focuses only on restriction, not habit-building
- No emotional wellness or mindfulness support
- Feels punitive rather than supportive

GAP IDENTIFIED

Tracks behavior but does not help users improve it mindfully

Student Needs	Headspace	Forest	Google Digital Well-Being	Notion	Apple Screen Time

Early Research Stage

Mental Health & Digital Challenges Among Students:

- Studies show 1 in 3 students experience anxiety, stress, or burnout during academic life.
- In India, youth aged 15–24 are among the most emotionally vulnerable yet least likely to seek help.
- Constant screen exposure, notifications, and academic pressure contribute to digital fatigue and reduced focus.
- Students often avoid traditional mental health apps due to stigma, complexity, or clinical tone.
- There is a growing need for a non-judgmental, simple, and daily-use support system rather than therapy-based solutions.

Final Key Insights

Insights	What LifeLens Should Do
Users feel distracted and mentally overloaded throughout the day	Provide a unified dashboard with focus, routines, and wellness together
Frequent notifications break focus and increase stress	Enable mindful notification filtering with only essential alerts
Users depend on multiple apps for daily tasks and self-care	Combine focus, reminders, and habits into one seamless system
Users forget breaks, hydration, and rest during work/study	Offer gentle, context-aware reminders without pressure
Screen fatigue affects emotional well-being and motivation	Include calm visuals, breathing space, and low cognitive load UI
Users want balance, not more digital complexity	Include calm visuals, breathing space, and low cognitive load UI

User Persona

Aarav Mehta
26 Years Old
Customer Service Agent at Amazon
Living in Pune, India

"My routine is upside down, and I need my phone to help —not exhaust—me."

About
Aarav works as a call agent for Amazon's customer support team. His night shifts often disrupt his sleep cycle and eating habits. He spends long hours in front of screens handling queries, which leaves him physically tired and mentally drained. During breaks, he scrolls on his phone or watches videos to relax — but this habit worsens his sleep schedule. He wishes to organize his daily routine better and maintain a healthier work-life balance despite the odd hours

Pain Points

- Irregular sleeping patterns causing fatigue and irritability.
- Feels mentally cluttered after long hours of repetitive screen use.
- Uses multiple apps for scheduling, health tracking, and reminders — making things more confusing.
- Struggles to stay consistent with hydration, meals, and exercise due to work timing.

Goals

- Maintain focus and alertness during night shifts.
- Improve sleep quality and develop a healthy daily routine.
- Balance personal time and work responsibilities effectively.
- Reduce mental fatigue and stress through mindful breaks.

Riya And
20 Years Old
College Student (Design Major)
Living in Bangalore, India

"I want to stay productive, but my phone distracts me before I even realize it."

About
Riya is an active design student who juggles college classes, projects, and social media. She constantly switches between apps — one for notes, one for reminders, and another for relaxation. While she's enthusiastic about staying productive, she often ends up feeling mentally exhausted and guilty for procrastinating.

Pain Points

- Feels distracted by constant notifications.
- Finds productivity apps too complex and overwhelming.
- Easily loses motivation after a few days of using new tools.
- Feels anxious when she wastes time on her phone.

Goals

- Improve her focus during study sessions.
- Build a consistent daily routine for sleep, study, and relaxation.
- Reduce unnecessary phone usage and distractions.
- Stay motivated and track personal progress visually.
